References
**Implementation**

**Purpose of the SEP**
To examine the relationship between physics self-efficacy and student performance in introductory physics classrooms.

**Course Level: What kinds of courses is it appropriate for?**
Intro college

**Content: What does it assess?**
Beliefs / Attitudes (self-efficacy)

**Timing: How long should I give students to take it?**
5 minutes

**Example Questions**
I can solve for the variable \( r \) in the expression \( F = \frac{Gm_1m_2}{r^2} \)

*Strongly Disagree  Disagree   Neutral   Agree   Strongly Agree*

**Access: Where do I get the assessment?**
Download the assessment from physport at [www.physport.org/assessments/SEP](http://www.physport.org/assessments/SEP).

**Versions and Variations: Which version of the assessment should I use?**
The latest version of the SEP, released in 2004, is the pilot version (version P).

**Administering: How do I give the assessment?**
- Give it as both a pre- and post-test. This measures student learning.
  - Give the pre-test before you cover relevant course material.
  - Give the post-test at the end of the term.
- Use the whole test, with the original wording and question order. This makes comparisons with other classes meaningful.
- Make the test required, and give credit for completing the test. This ensures maximum participation from your students.
- Tell your students that the test is designed to evaluate the course (not them), and that knowing how they think will help you teach better. Tell them that correctness will not affect their grades (only participation). This helps alleviate student anxiety.
- Refer to the test by a generic title like "Physics attitudes test" to prevent students from looking up the answers.
- For more details, read the [PhysPort Guides](http://www.physport.org/expert/AdministeringConceptInventories/)

**Scoring: How do I calculate my students’ scores?**
- Each student's score is sum of their points for each question, where strongly disagree is 1 point, strongly agree is 5 points, and disagree, neutral and agree are 2-4 points respectively. Possible range of scores is 8 to 40.
- Use the [PhysPort Assessment Data Explorer](http://www.physport.org/explore/SEP) for analysis and visualization of your students' responses

**Clusters: Does this assessment include clusters of questions by topic?**
There are no clusters of questions on the SEP.

**Typical Results: What scores are usually achieved?**
Typical scores on the SEP from [Shaw 2004](http://www.physport.org/explore/SEP) for males and females in a conceptual physics course (Table 2), two terms of college physics courses (Table 3) and a calculus-based second semester physics course (Table 4). In conceptual physics, male students
had a higher mean score than female students. In college physics and calculus-based physics, there is no significant difference in responses between male and female students.

Interpretation: How do I interpret my students’ scores in light of typical results?

It is hoped that students’ SEP scores improve as a result of your course or at least do not decrease from pre- to post-test. Aim for positive shifts in scores from pre- to post-test. You can also compare your SEP scores to those listed in Typical Results.

Background
**Similar Assessments**

The SOSESC-P has 33 questions, whereas the PSEQ and SEP have 5 and 8 questions, respectively, so the SOSESC-P probes more dimensions of self-efficacy in more depth than the other surveys. There is a lot more variety in the questions on the SEP than the questions on the PSEQ. The SEP asks students about their belief that they can solve very specific physics problems, their comfort using a computer, and if they consider themselves good at mathematics, whereas the PSEQ questions are about physics in general. All have the same level of research validation.

**Research: What research has been done to create and validate the assessment?**

*Research Validation: Bronze*

This is the third highest level of research validation, corresponding to at least 3 of the validation categories below.

- [x] Based on research into student thinking
- [x] Studied using expert review
- [ ] Studied using student interviews
- [ ] Studied using appropriate statistical analysis
- [ ] Research conducted at multiple institutions
- [ ] Research conducted by multiple research groups
- [x] Peer-reviewed publication

**Research Overview**

Based on a literature review, the developers created an 8 question pilot version of the SEP where the questions were modeled after self-efficacy questions from surveys in other disciplines. The questions underwent expert review and were revised. The SEP was tested with over 500 students, and the results are published in one peer-reviewed paper.

**Developer: Who developed this assessment?**

Kimberly A. Shaw
