

EBAPS scoring scheme

Each item is scored on a scale of 0 (least sophisticated) to 4 (most sophisticated). The [scoring scheme](#) is non-linear to take into account question-by-question variations in whether, for instance, neutrality is more or less sophisticated. A subscale score is simply the average of the student's scores on every item in that subscale. (When an item within a given subscale is left blank, the average is calculated without that item included.) Sometimes we multiply through by 25 in order to report subscale scores on a scale of 0 to 100.

To automate the scoring using Microsoft Excel, download the Excel scoring [template](#).
